

Ramp Cat — Forensics Write-up

Category: Forensics **Points:** 100 **Flag format:** flag{...}

1. Challenge

The challenge provides a picture of Ramp Cat and asks us to determine where the cat lives. The key clue is hidden in the image metadata.

2. Extracting GPS Metadata

Using ExifTool on the image revealed the following GPS fields:

```
GPSLatitude: 40,43.2257N
GPSLongitude: 73,59.0405W
GPSLatitudeRef: N
GPSLongitudeRef: W
```

These values represent degrees and decimal minutes: 40° 43.2257' N and 73° 59.0405' W.

3. Coordinate Conversion

Formula: decimal degrees = degrees + minutes / 60.

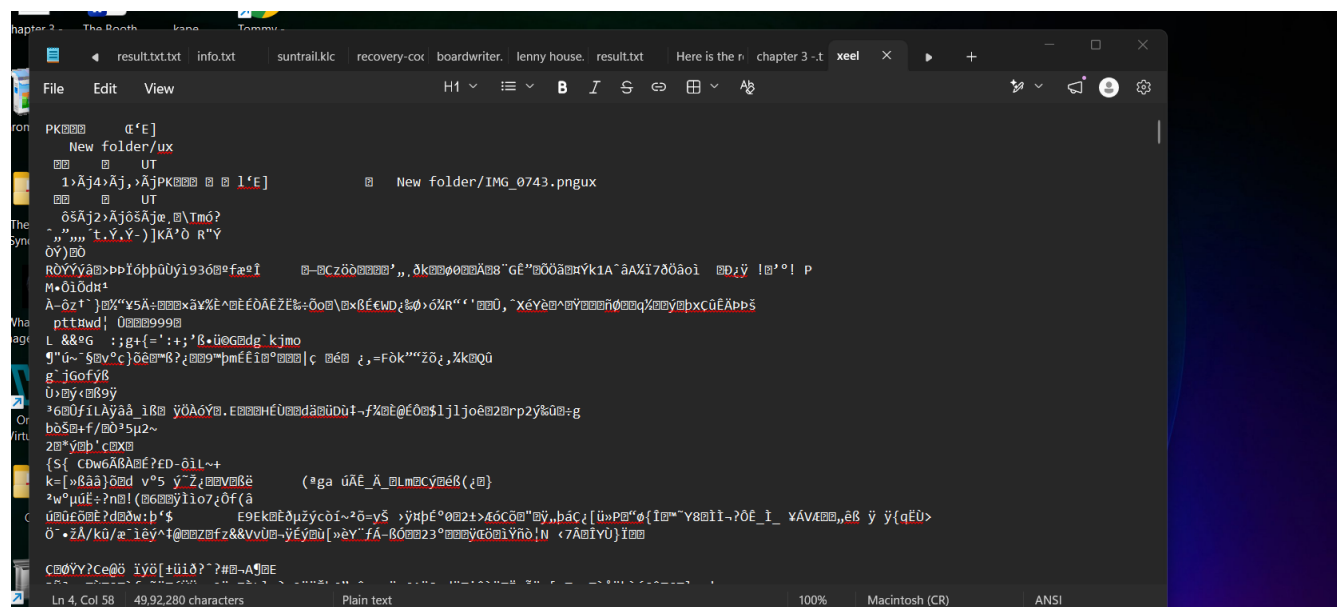

Latitude: $40 + (43.2257 / 60) = 40.7204283$
Longitude: $-(73 + (59.0405 / 60)) = -73.9840083$

Final coordinates: **40.7204283, -73.9840083**

4. Map Verification

Entering the coordinates into Google Maps places the point in the Lower East Side area of New York City, at 26 Clinton St, associated with Koneko, a cat café.

5. Conclusion

The GPS metadata leads to the Koneko location at 26 Clinton St. The final CTF flag is:

flag{Koneko}

Tools used: ExifTool and Google Maps.
